# Who is DRI?

- Co-leads:  
Ron Stewart (*McGill*) & John Pomeroy (*Sask*)
- Investigators:  
Bonsal (*Sask/NHRC*), Bullock (*Man*), Gyakum (*McGill*), Hanesiak (*Man*), **Hayashi (*Calg*)**, Leighton (*McGill*), Lin (*McGill*), Pietroniro (*Sask/NHRC*), Snelgrove (*Mem*), Strong (*Alta*), **van der Kamp (*Sask/NHRC*)**, Wheaton (*Sask/SRC*), **Woodbury (*Man*)**
- Collaborators:  
Boer (*MSC*), Cayas (*Ouranos*), Derome (*McGill*), Donaldson (*MSC*), Granger (*NHRC*), Johnston (*SRC*), Martz (*Sask*), Prowse (*NWRI*), Raddatz (*Man*), Ritchie (*MSC*), Shabbar (*MSC*), Sills (*MSC*), Szeto (*MSC*), Wittrock (*SRC*), Papakyriakou (*Man*)

# Current Precipitation Compared to Historical Distribution

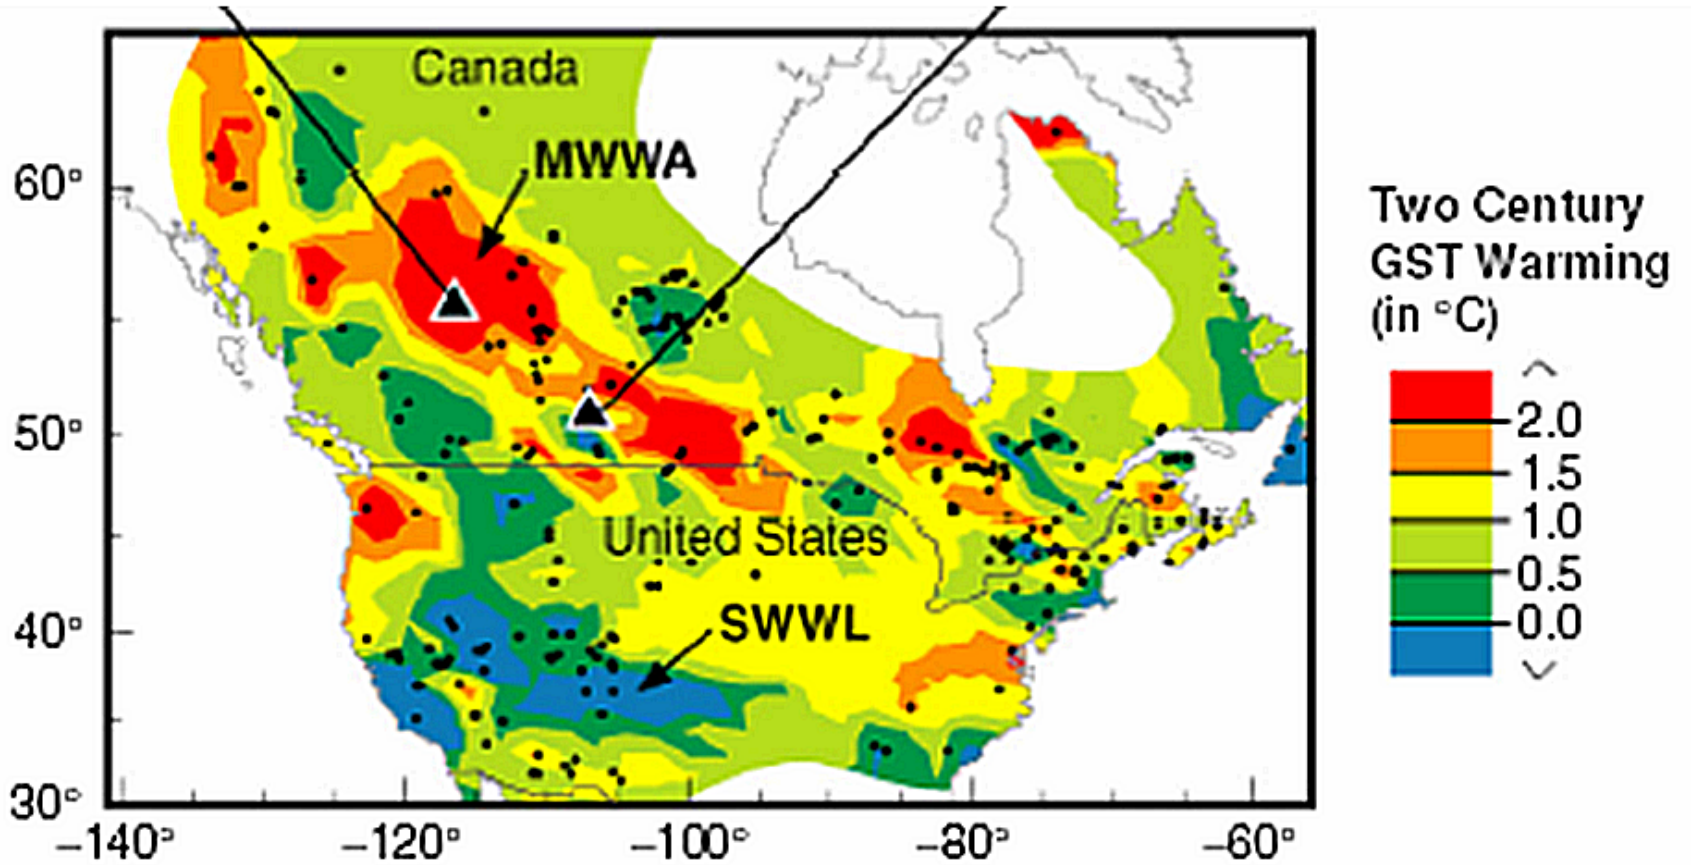

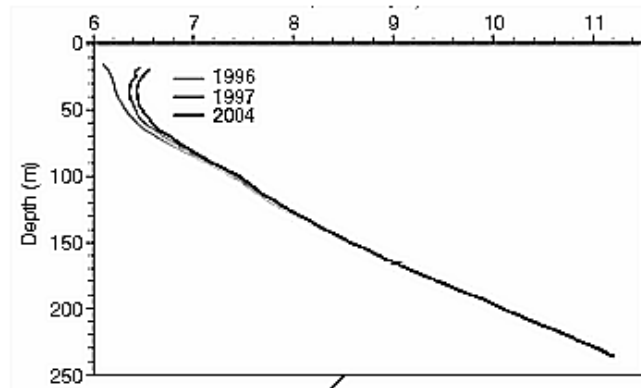

September 1, 2000 to August 31, 2001 (A.M.)

Prepared by PFRA (Prairie Farm Rehabilitation Administration) using data from the Timely Climate Monitoring Network and the many federal and provincial agencies and volunteers that support it.

Source: Majorowicz and Safanda (2005)

# Overview

1. Objectives and background
2. Hydrogeology of the ADA
3. Groundwater modelling (MODFLOW)
4. Land surface modelling (CLASS)
5. Atmospheric modelling (MM5)
6. Coupling strategy
7. Software working tools
8. Field data required
9. Initial simulations and conclusions

# Objectives

- Climate change impacts and adaptations for the ADA
- Couple atmosphere, surface and groundwater models

Provide :

1. **Lower boundary condition for the atmospheric model**
2. **Management schemes for sustainability of water quantity / quality**
3. **Prediction of pollution stemmed from human practices over ADA**

# Prelude

- How do we deal with climate change now?

Source: Fetter (2001, 4<sup>th</sup> ed)

- Water Budget

M.I. Jyrkama, J.F. Sykes, and S.D. Normani, 2002.  
Recharge Estimation for Transient Ground Water Modeling.  
Ground Water, 40(6), 638-648.

# Laural Creek Results Courtesy of M.I. Jyrkama

- Impact of **recharge** boundary condition on **groundwater flow**

Simulated vs. observed water levels at a monitoring well

# Enhancements

- WatCLASS Development

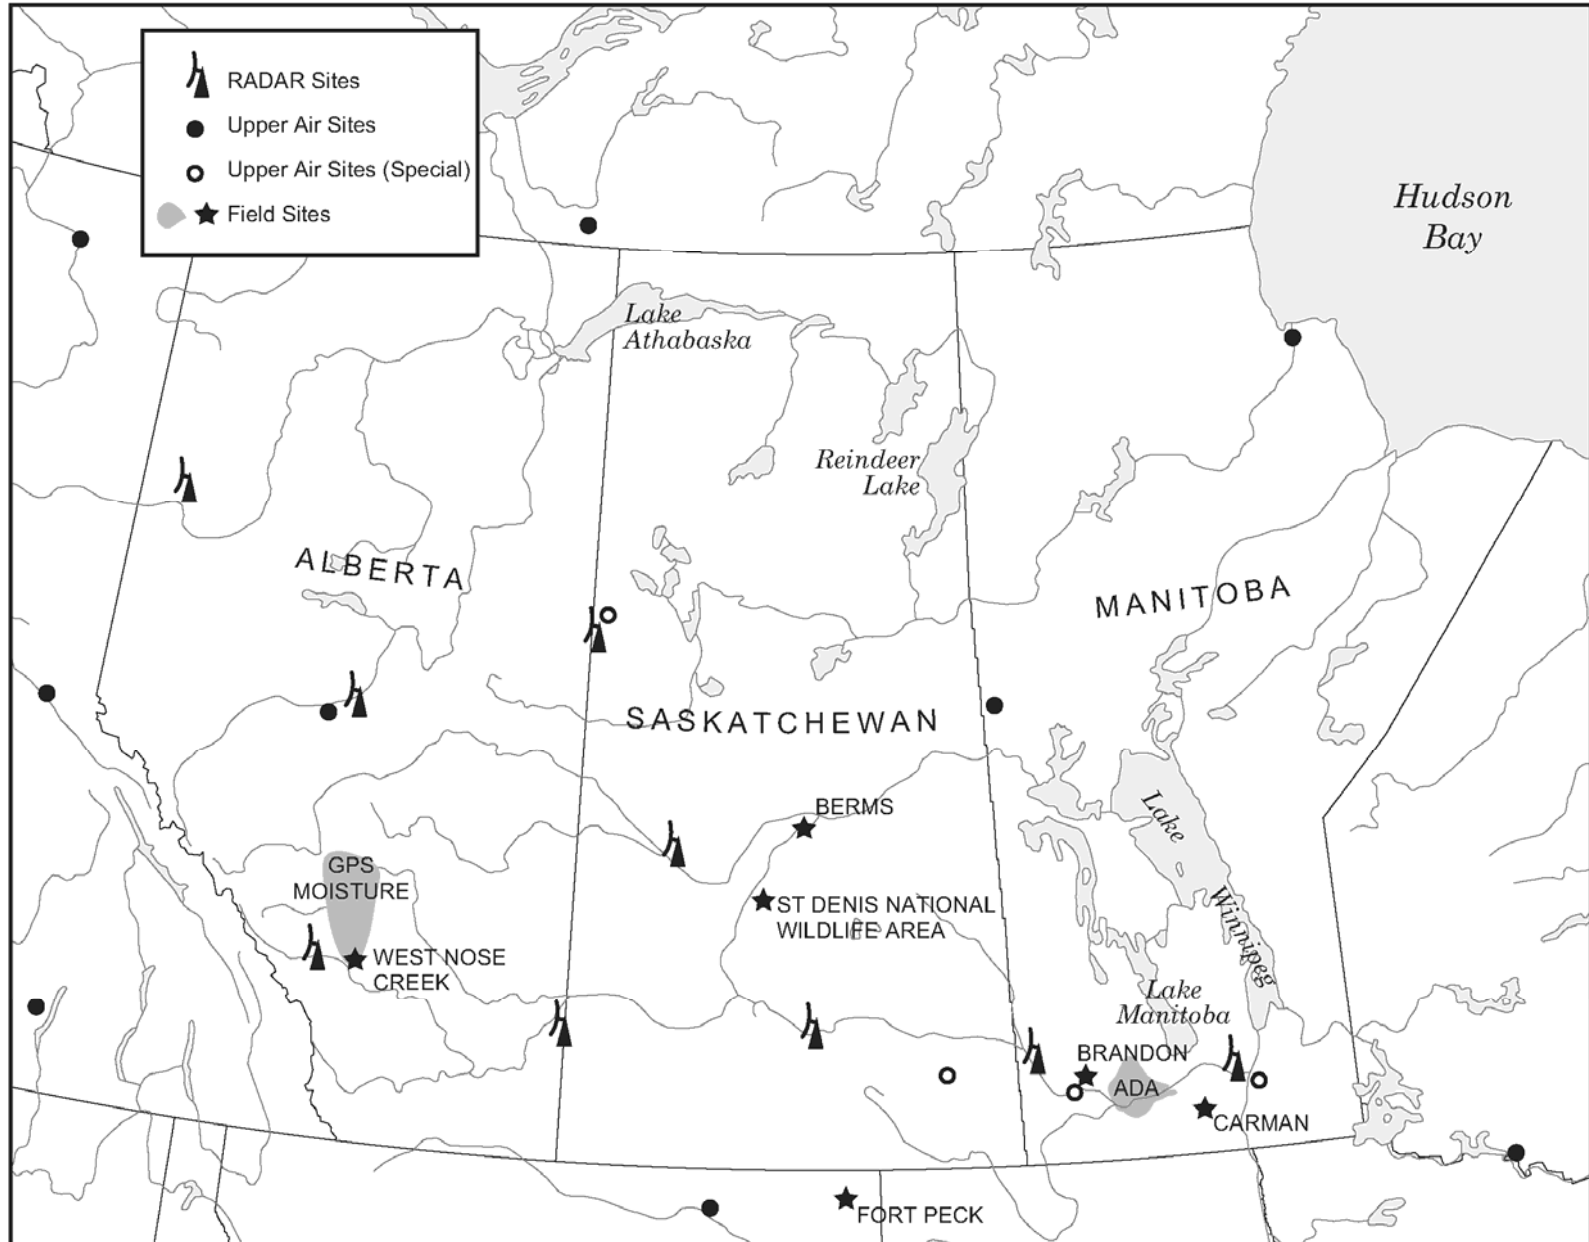

- Motivation for adding streamflow to atmospheric models
- Coupling WATFLOOD and CLASS (Snelgrove, 2002)

- Results

- BOREAS Tower simulations – Point Scale
- BOREAS Study Areas – Headwater Scale
- Mackenzie River – Atmospheric Domain

# ADA Hydrogeology

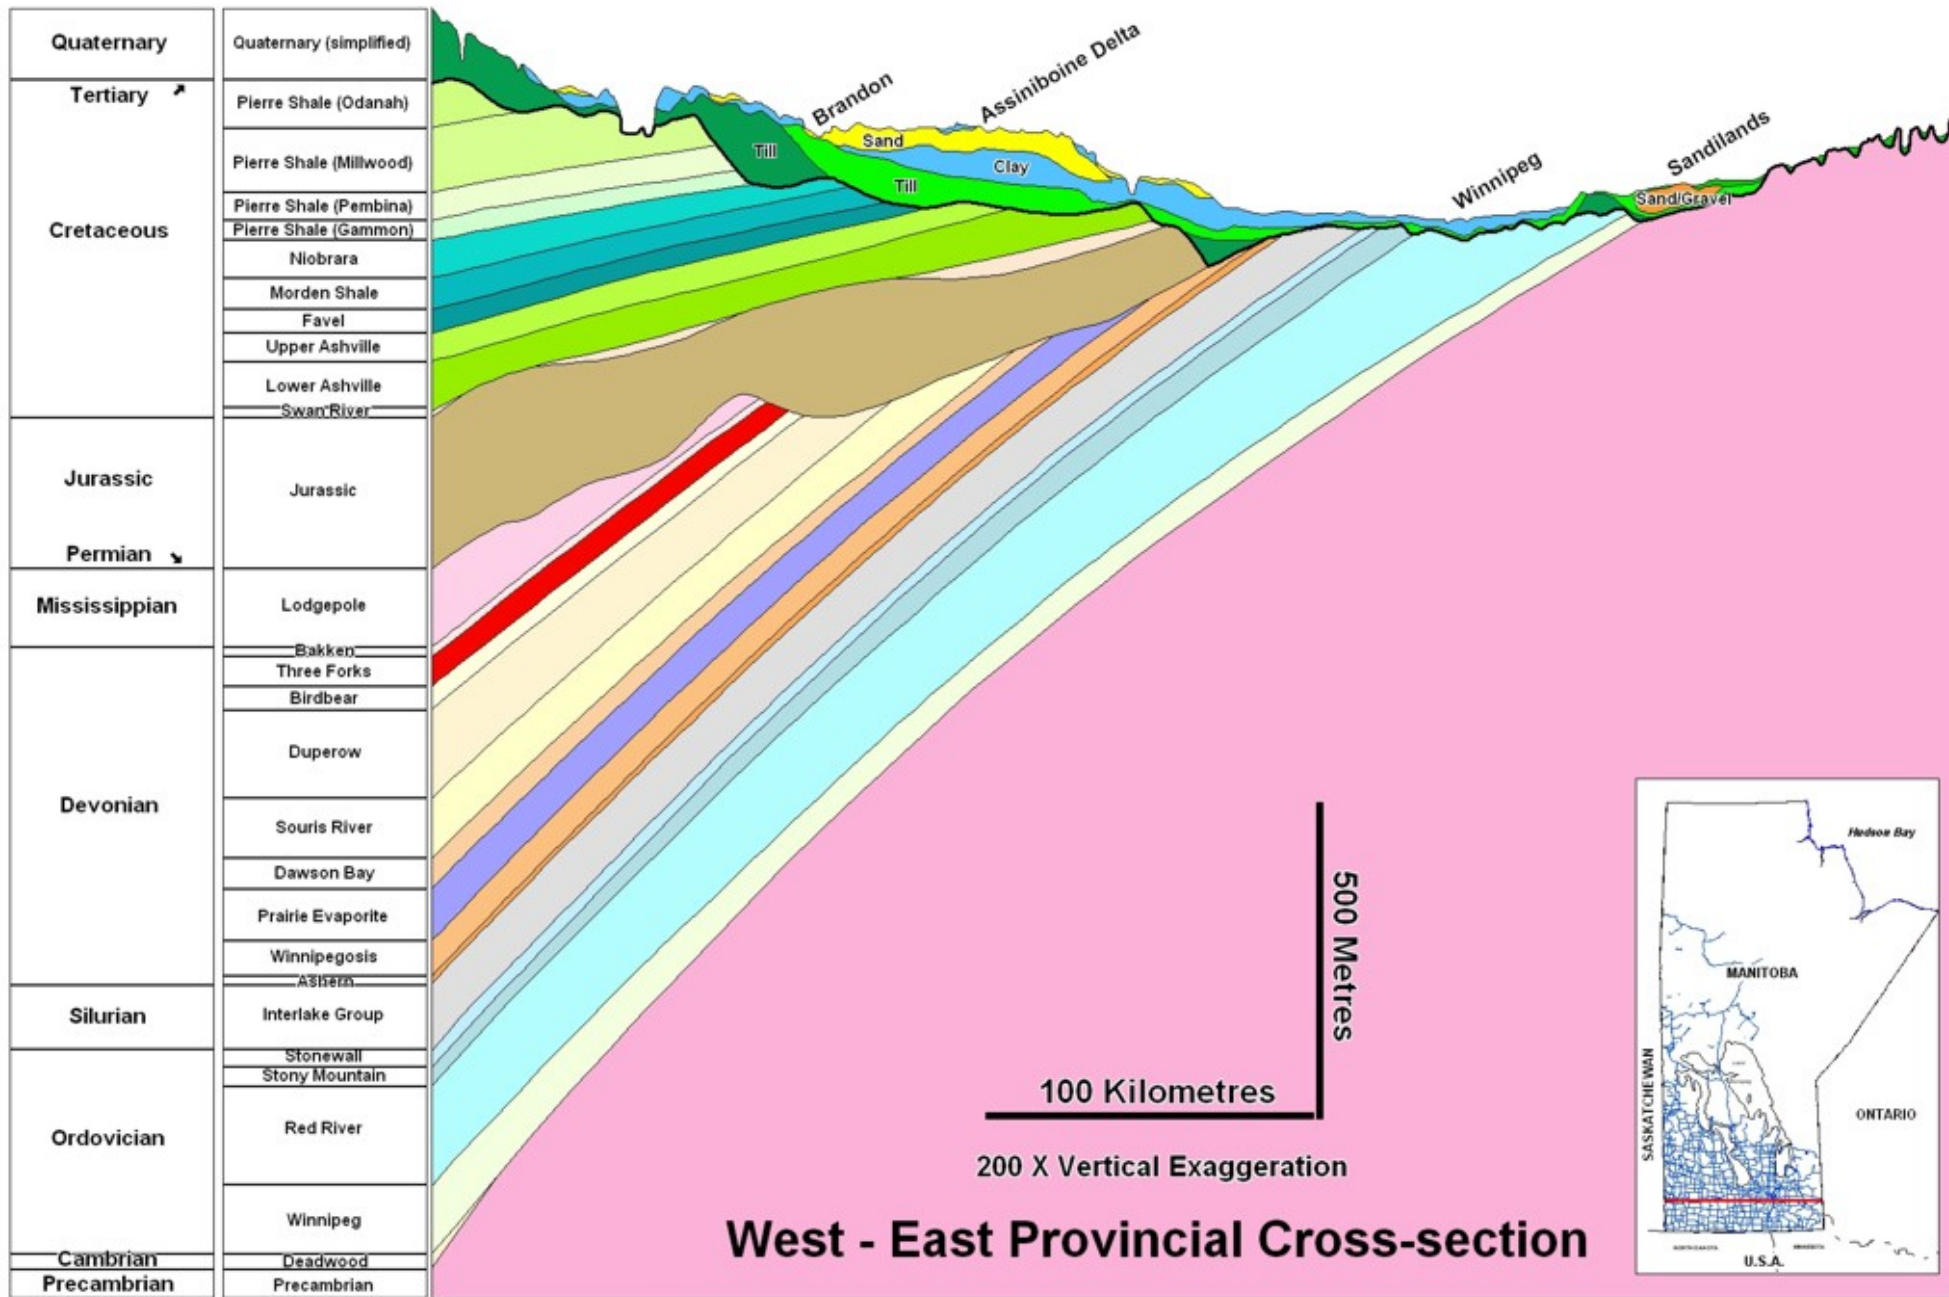

# Quaternary Geology with Shaded Relief Elevation for Southern Manitoba

North American Datum 1983  
2000 m Digital Elevation Model  
Horizontal Accuracy: 10 m  
Vertical Accuracy: 1 m

## West - East Provincial Cross-section

# Sand and Gravel Isopach of the Assiniboine Delta Aquifer (ft)

L.H. Frost and F.W. Render, 2002

- Bedrock 180 – 460 m
- Hydraulic Conductivity: 4 – 120 m/d
- Specific yield: 0.1 – 0.29

# Groundwater: MODFLOW

DEM of Assiniboine Delta Aquifer

# MODFLOW model test

# Distributed Water Balance

P-E

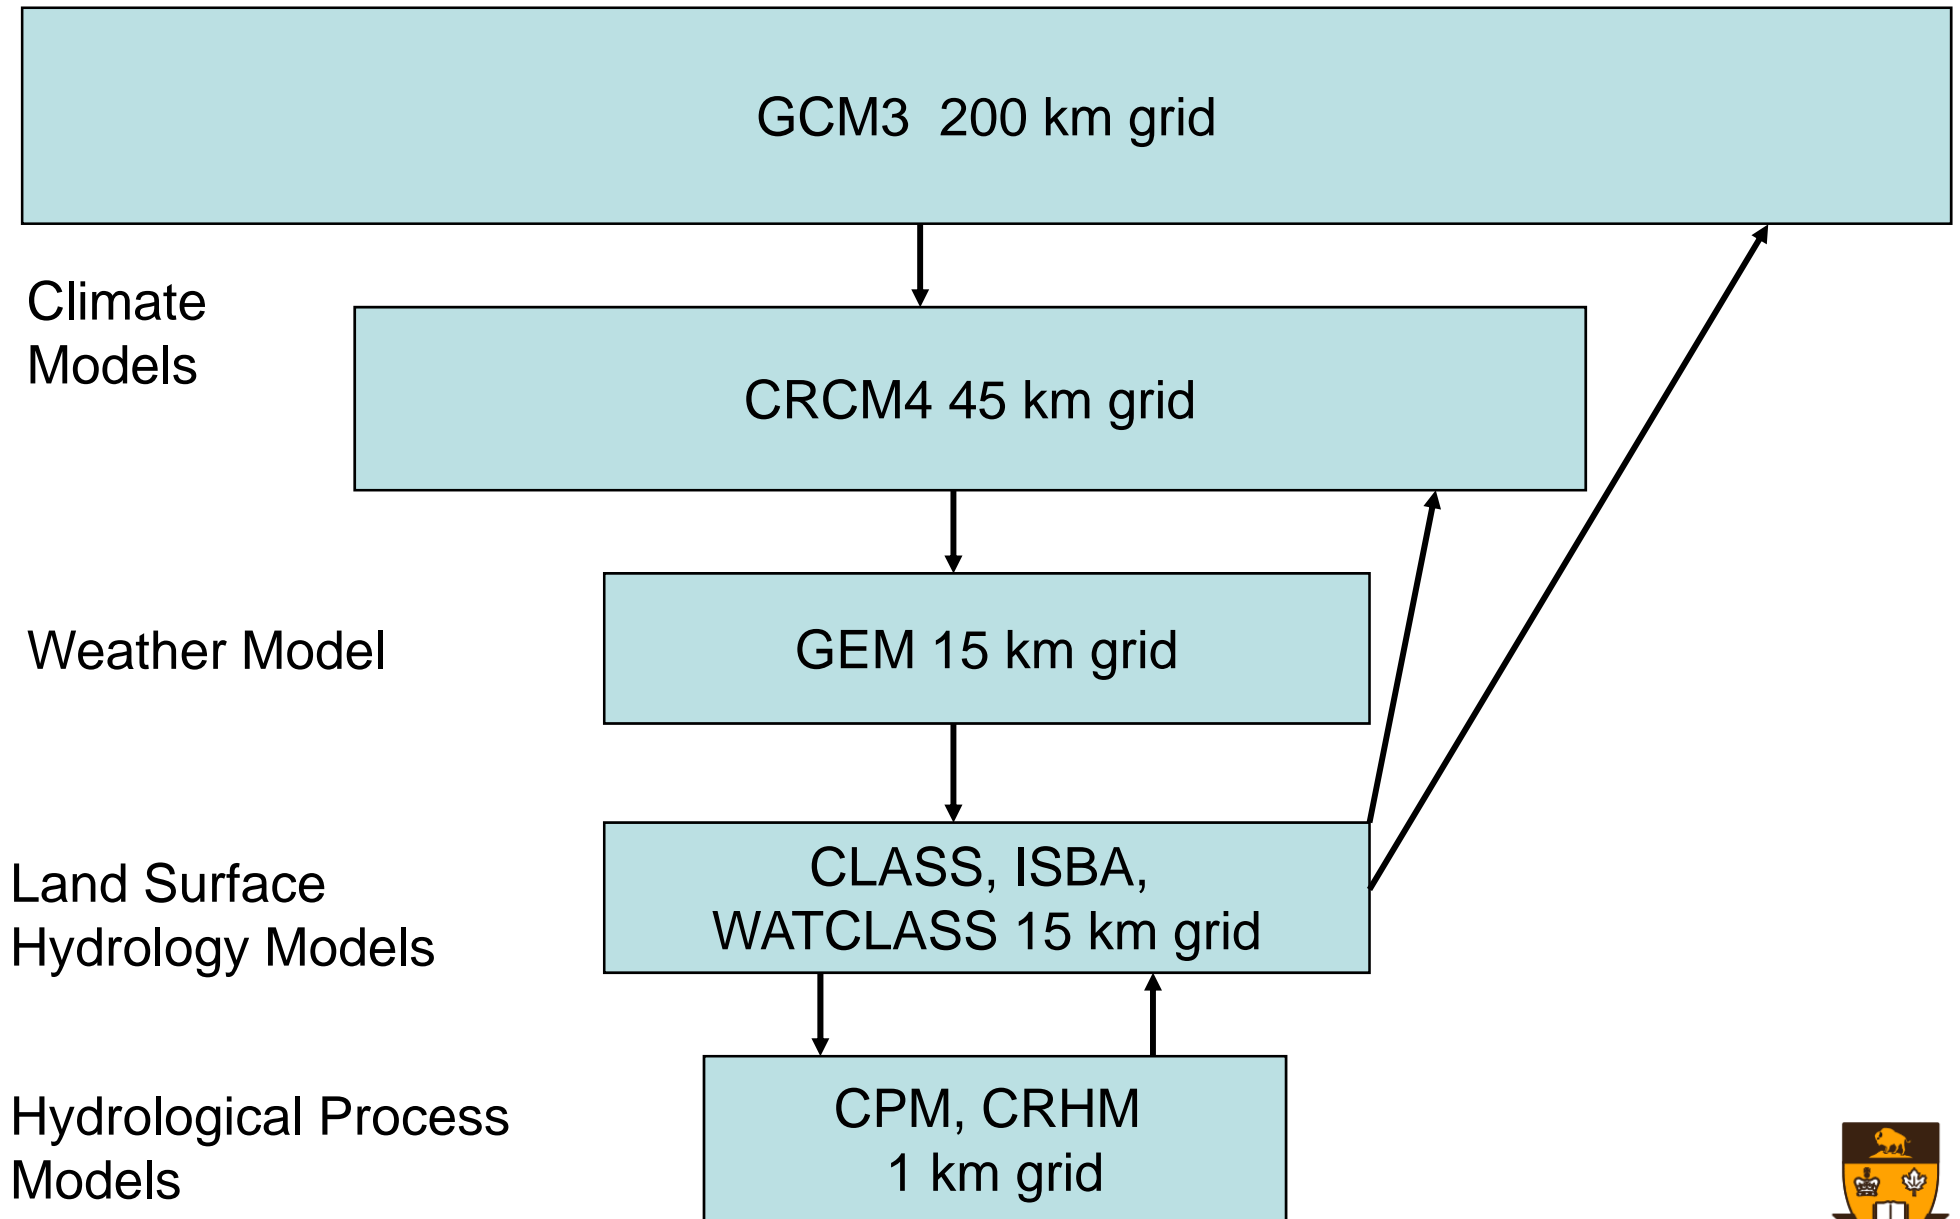

Outflow =  $Q_L$ , Runoff =  $R_L$

# Distributed Water Balance

# Atmospheric Models

# Atmospheric Modelling ( MM5 )

## Domain set-up for MM5 run

Center of the Course Domain:  
54 ° North , 98 ° West

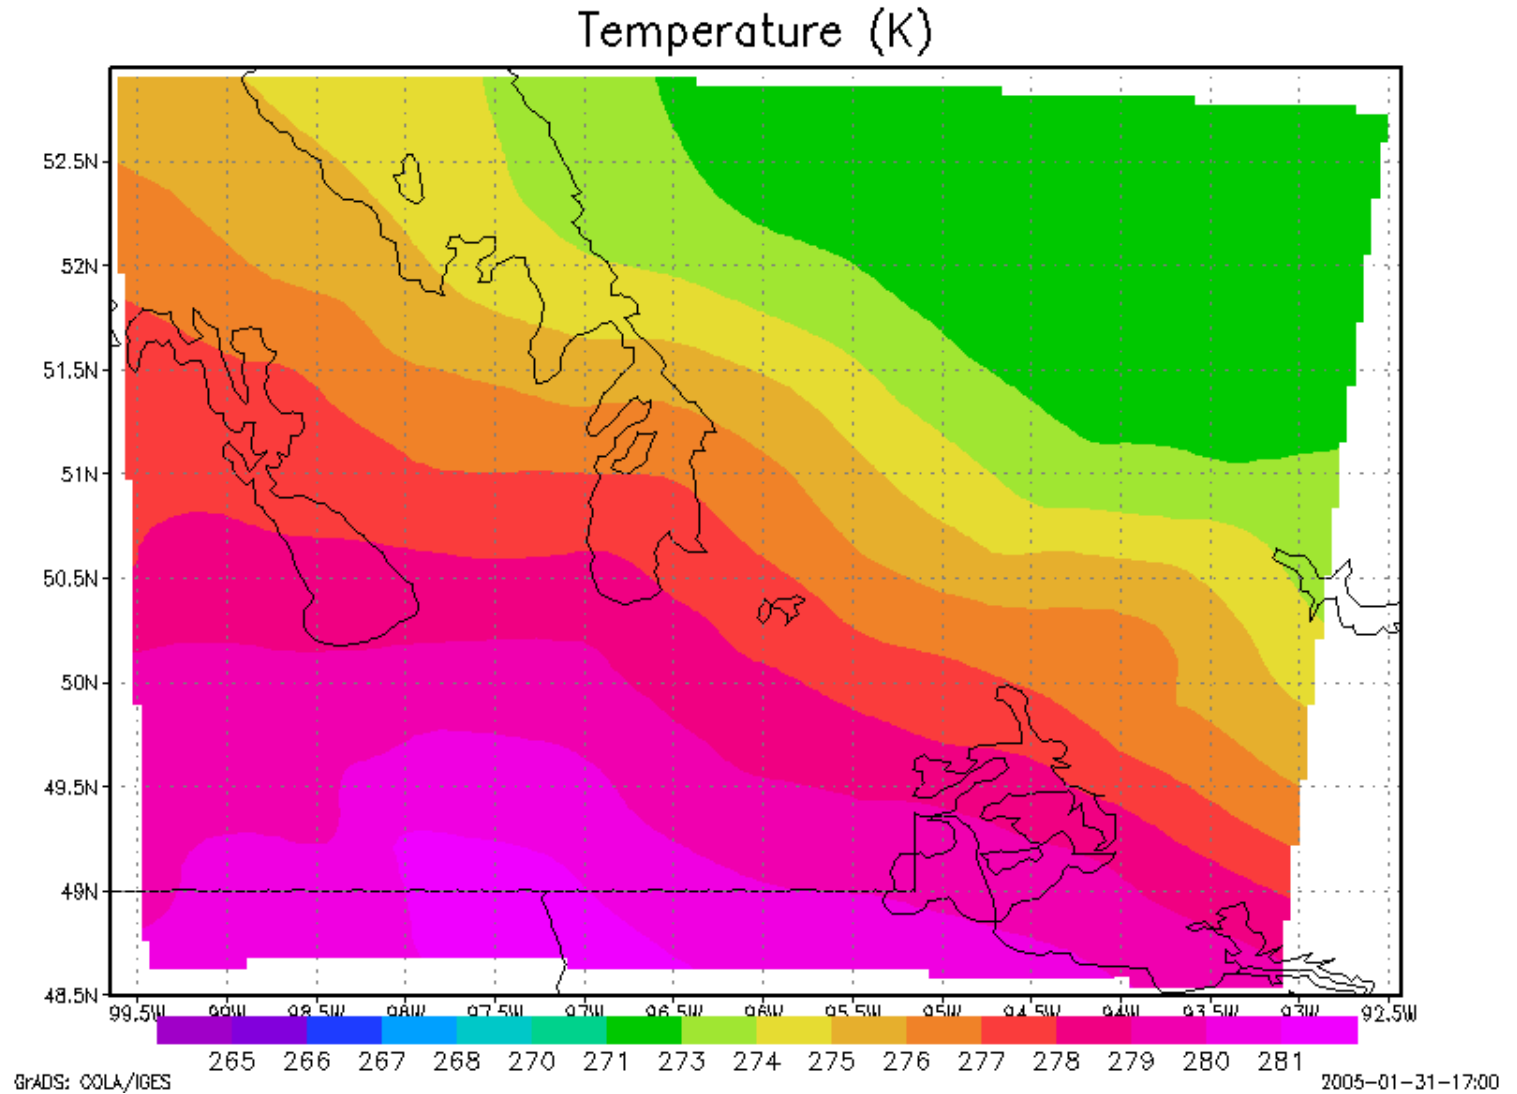

Domain/ Grid dist.	Grids E-W	Grids N-S
D01/90 Km	41	35
D02/30 Km	61	61
D03/10 Km	52	52

National Center for Environmental  
Prediction (NCEP) Reanalysis II data  
has been used to drive the model.

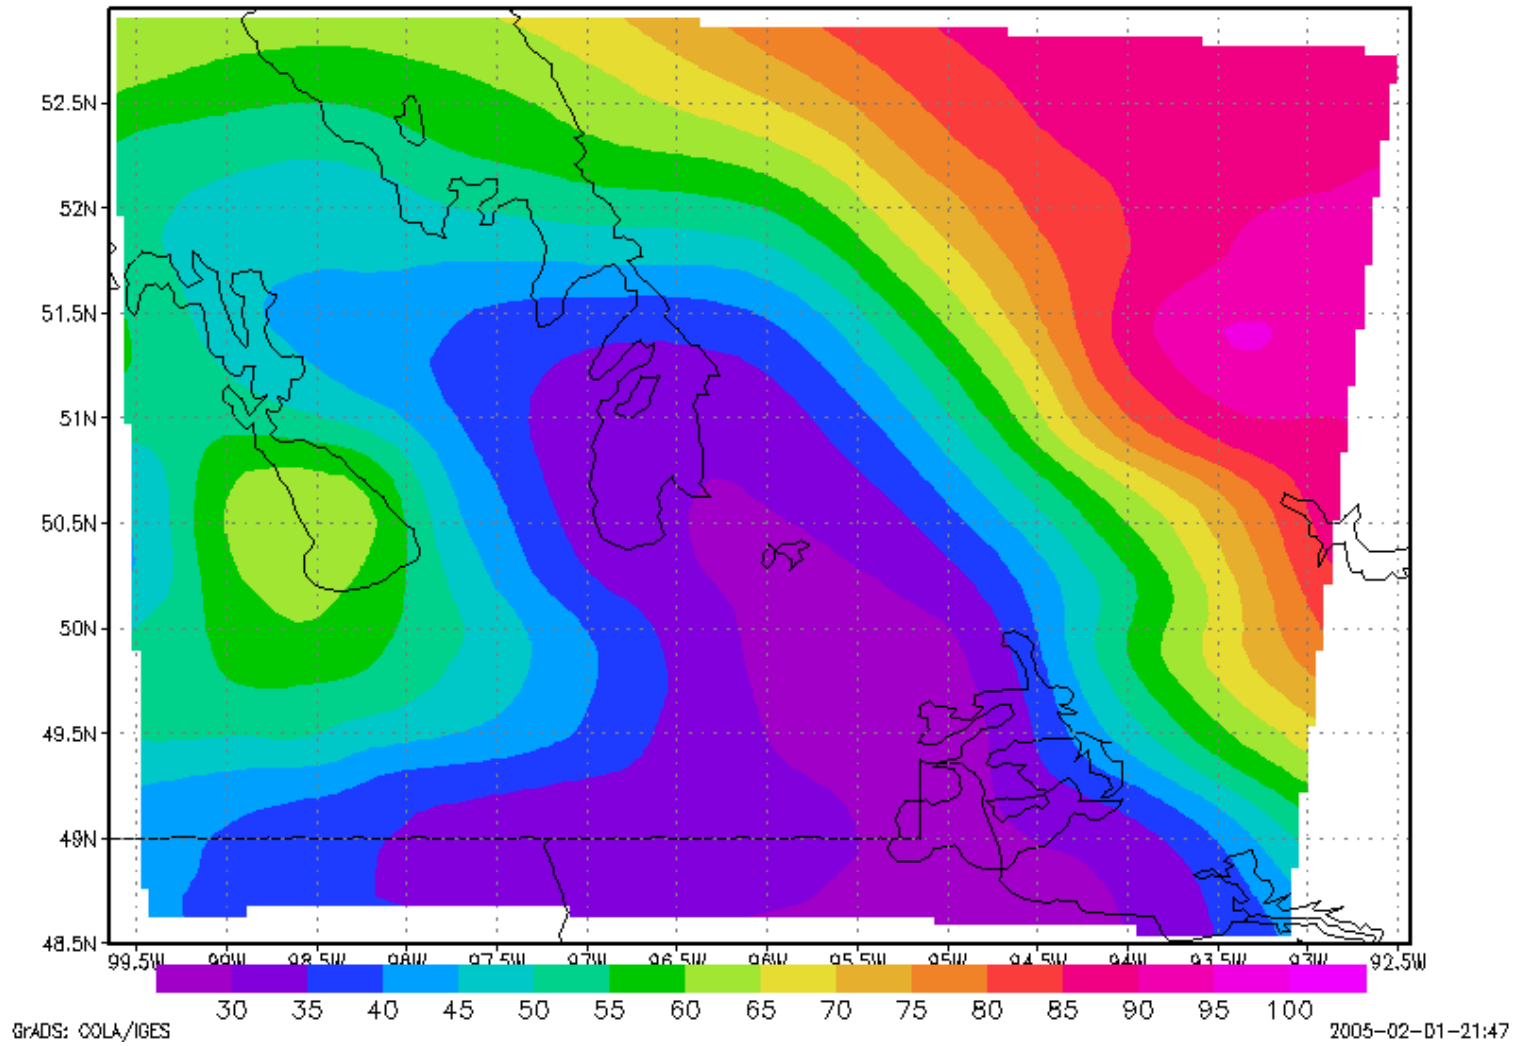

# Model Output :

**Animated Hourly  
Temperature output:  
From 00Z01MAY2004  
to 00Z02MAY2004**

# Model Output :

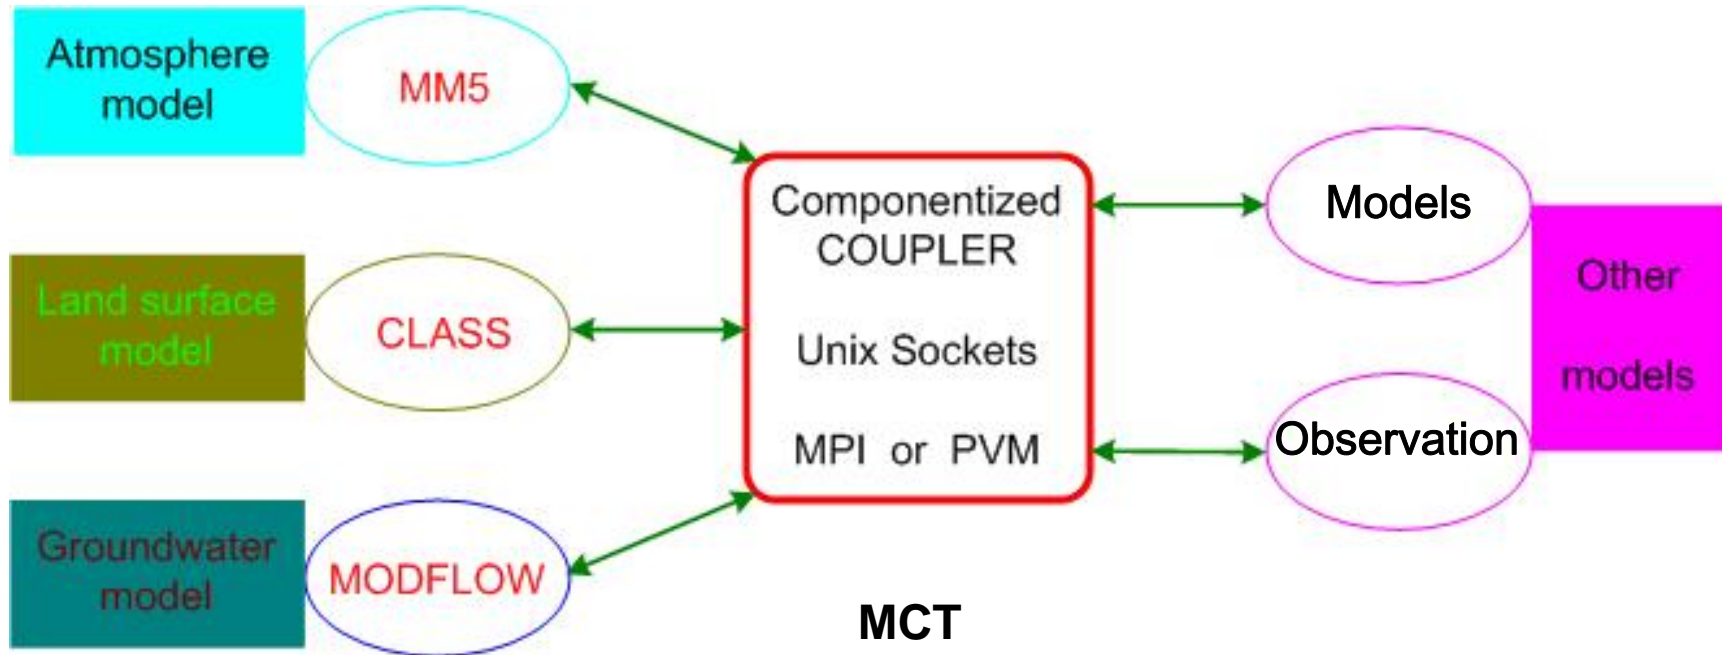

**Animated Hourly  
Relative Humidity  
output: From  
00Z01MAY2004  
to 00Z02MAY2004**

# Coupling Strategy

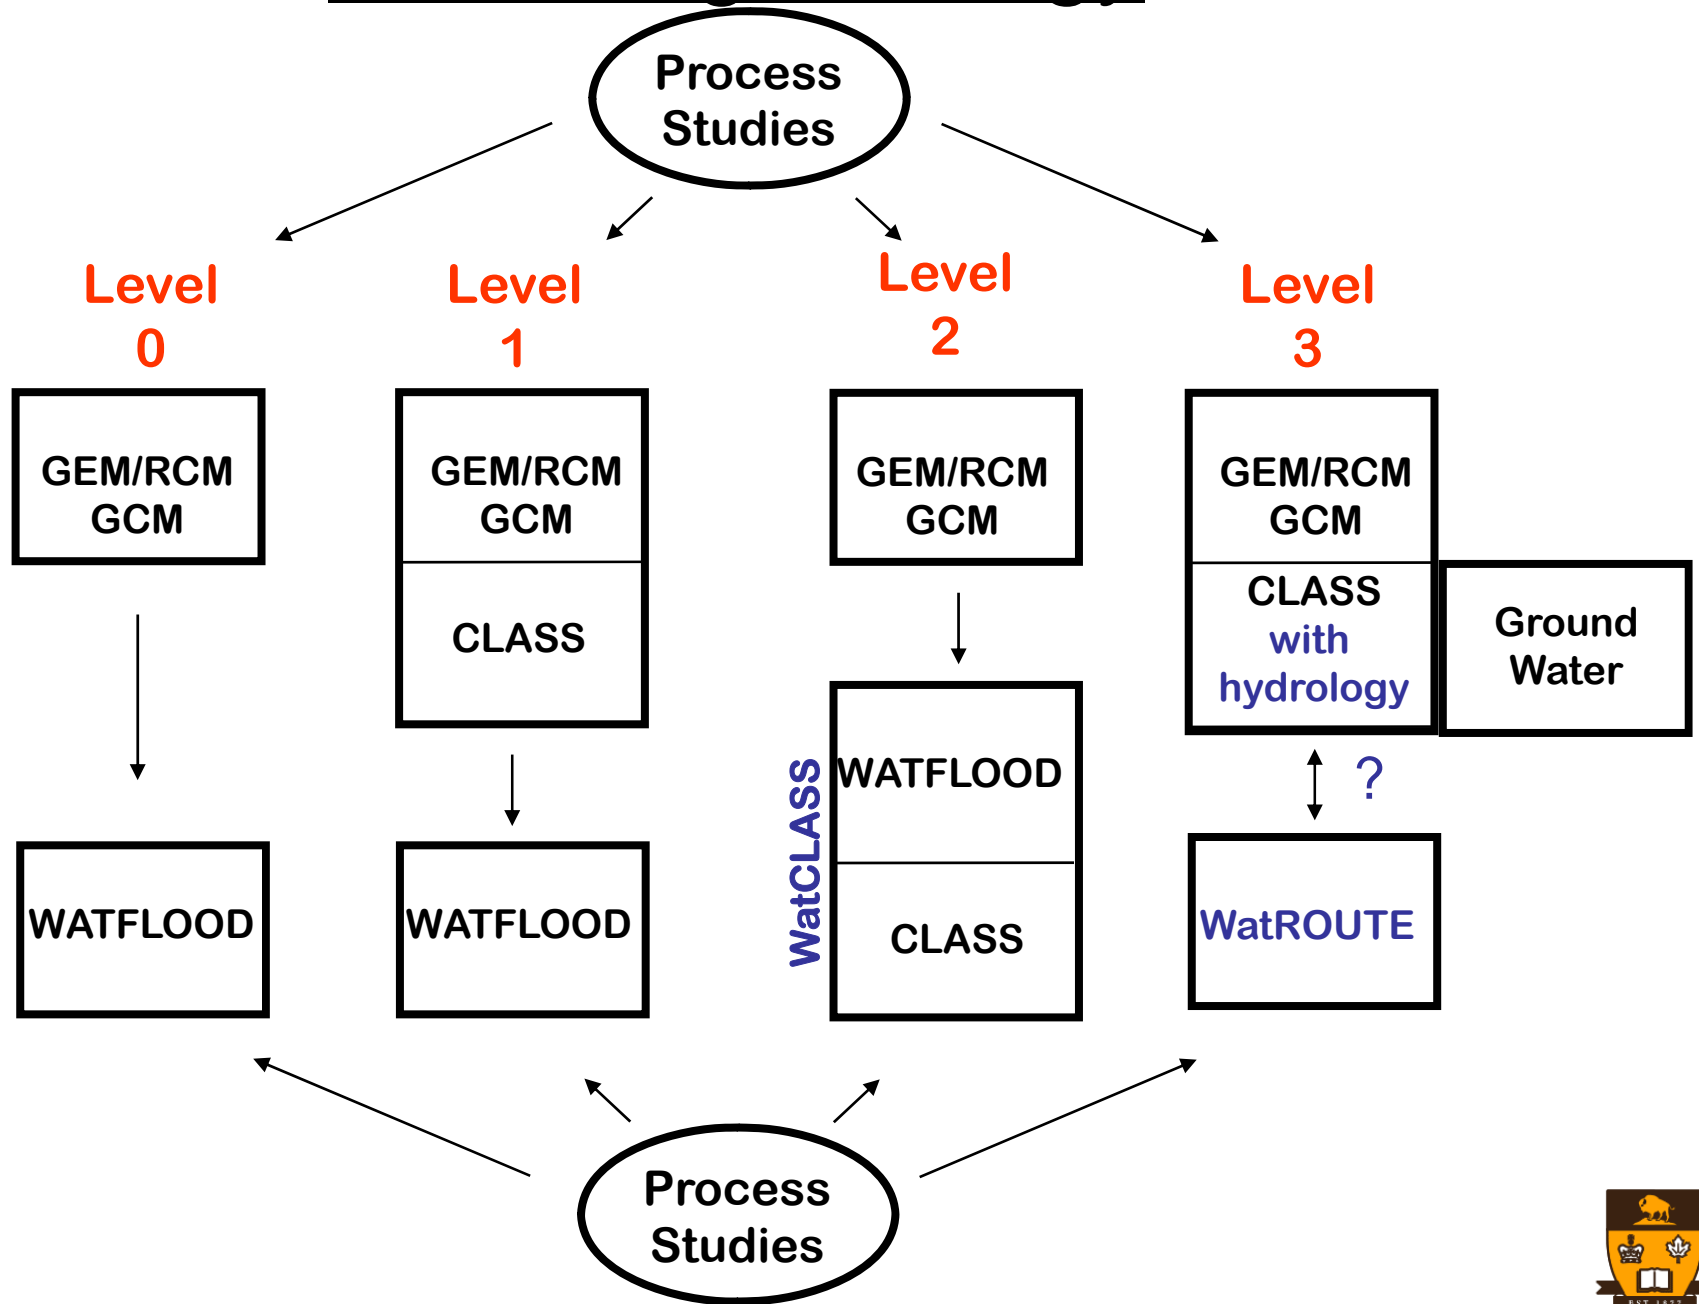

# Parallelized / coupled modelling environment

# Modelling Strategy

Integrated Modelling

# Software Working Tools

## Basics

Numerical / hydrological modeling

Computational analysis and optimization

High performance computing

## Development

MODFLOW : 70,000 code lines

CLASS : 10,000 code lines

Code structure analysis

Scientific / industrial programming

GIS : ArcView, ArcInfo, etc.

# Field Data Required

## Land-Surface, Streams

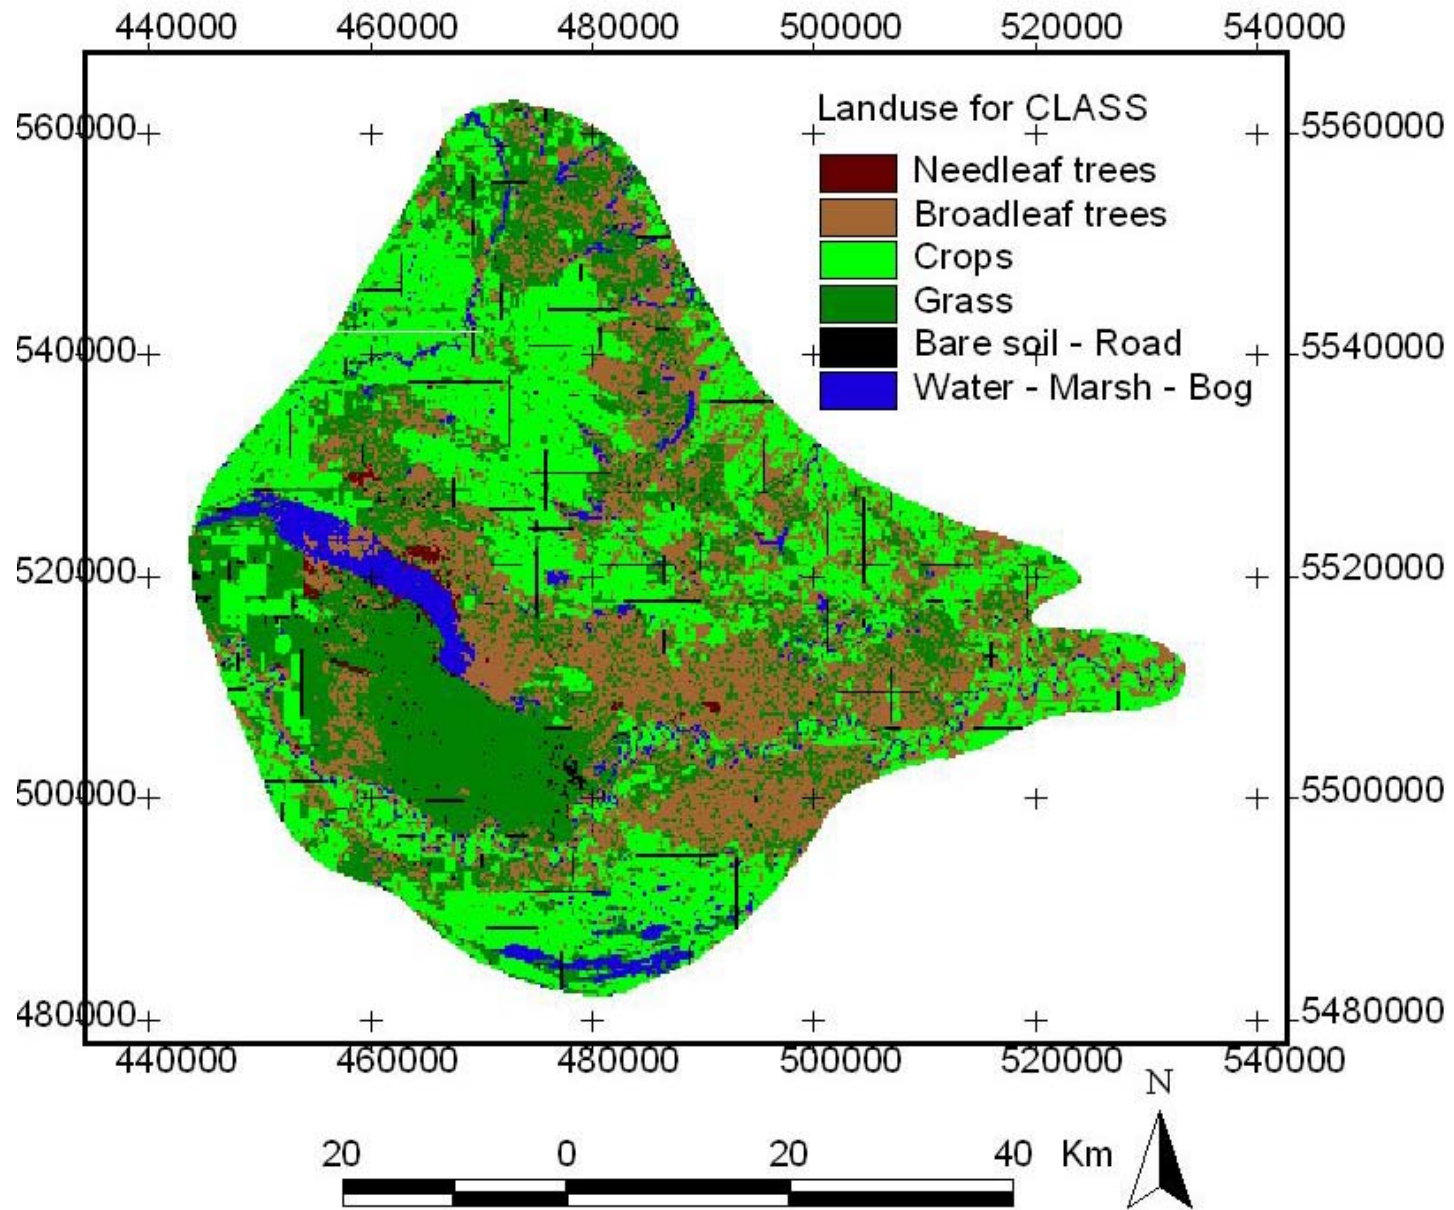

- Vegetation type
- Surface Soils
- Precipitation, Temperature
- Wind velocity, Humidity
- Radiation (long/shrt waves)
- Pressure
- Stream flow
- Snow depth
- Soil moisture

## Groundwater

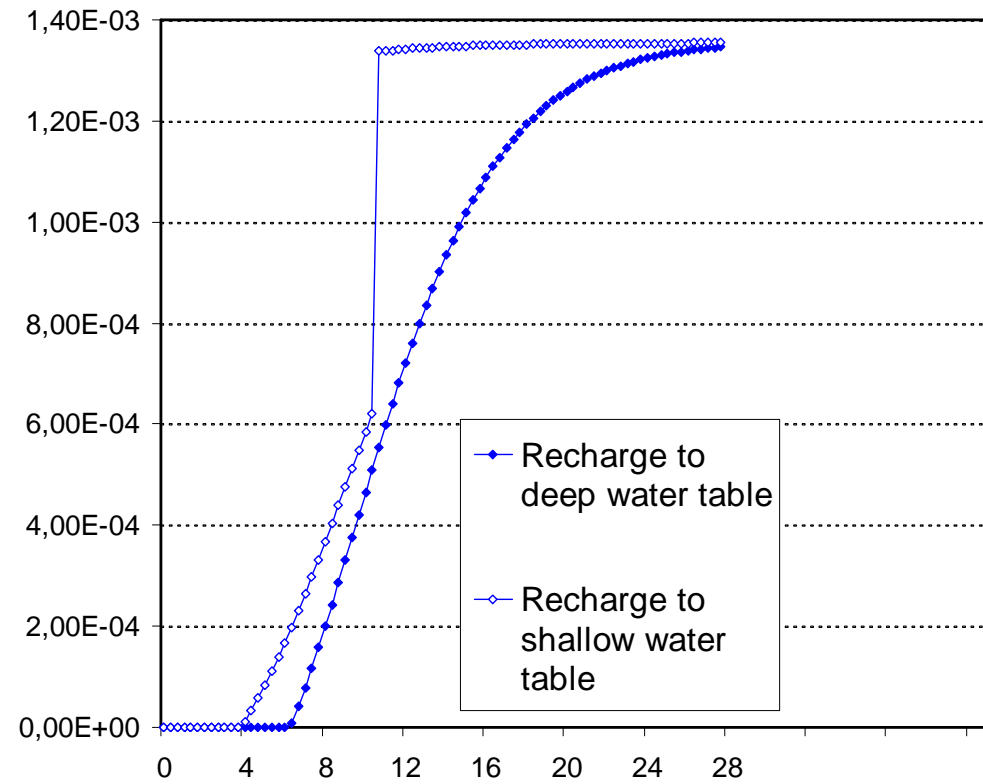

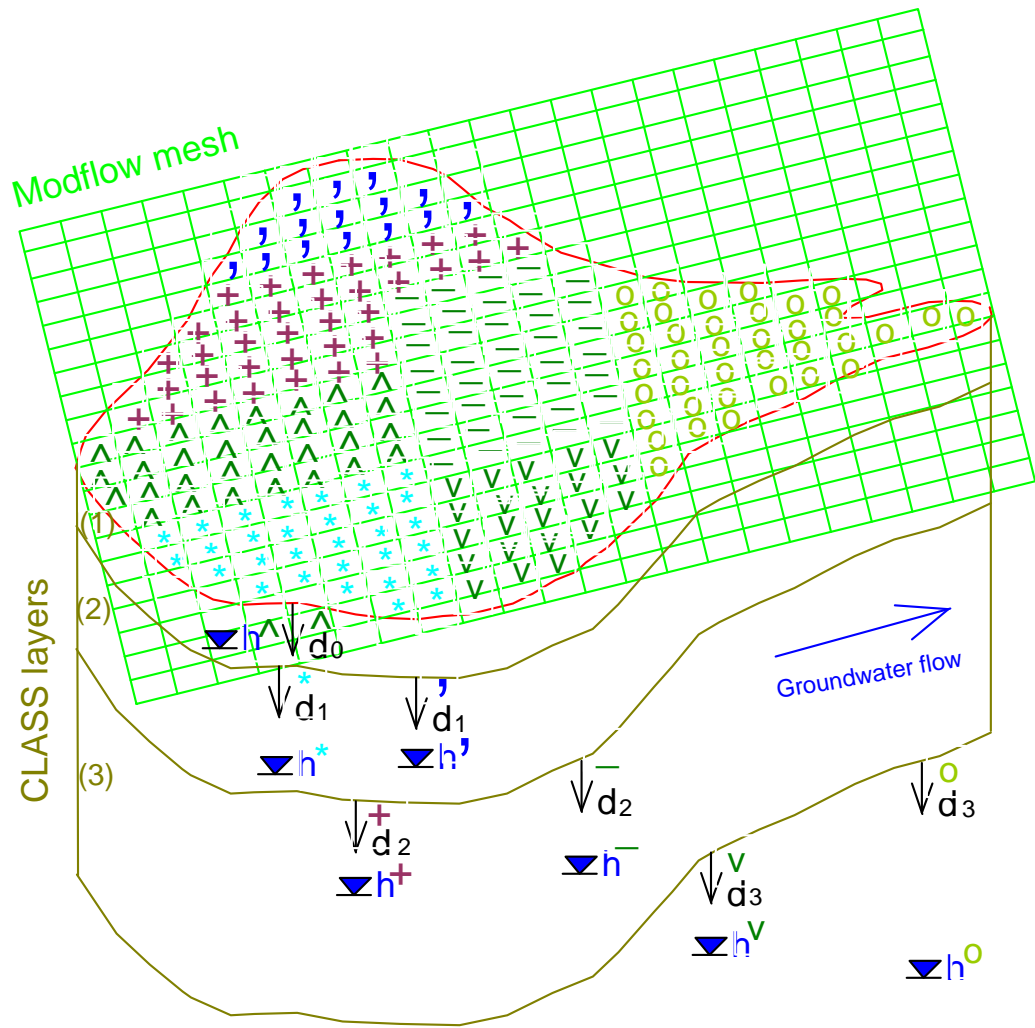

- Stratigraphy
- Well Observations
- Pumping test
- Soil Samples
- Transmissivity
- Time series heads
- Evaporation and Runoff

# Land Use

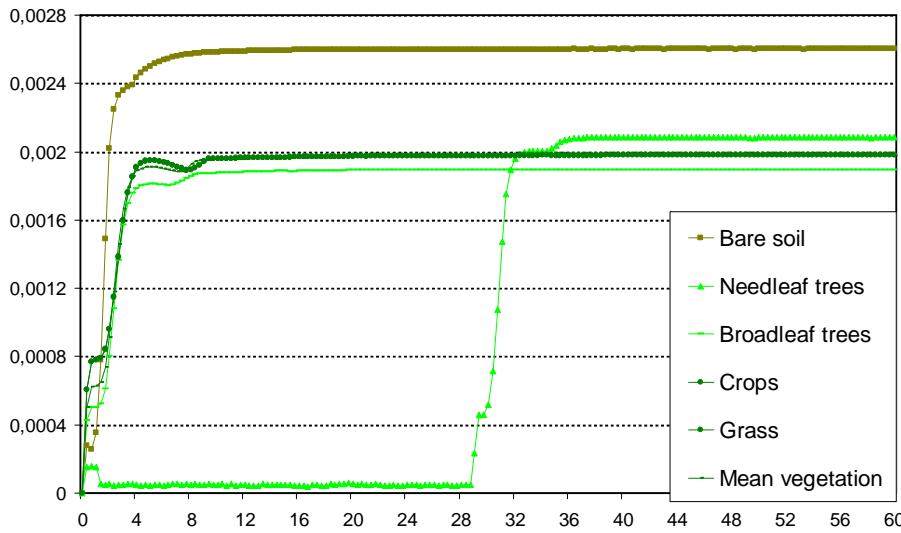

# Initial Coupled Simulations

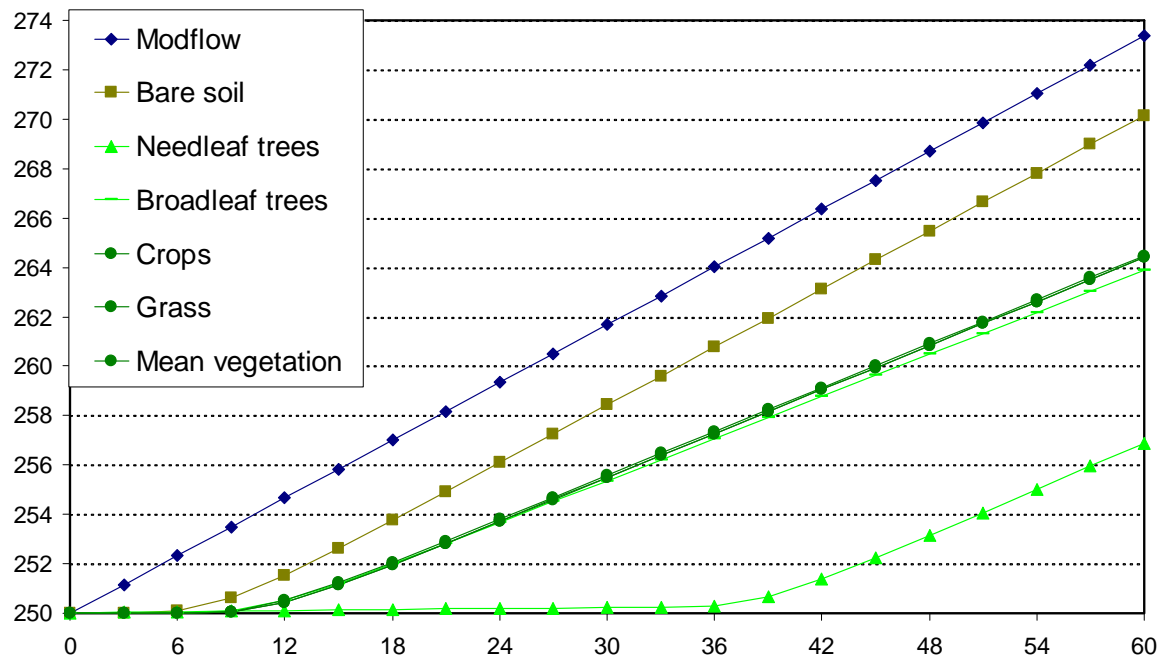

Coupling Modflow with 7 CLASS runs. Recharge affected according to mean head below

Drainage from Layer 2 (left) and Layer 3 (right) in m/day , for different soil coverage

Increase of deep water table according to recharge from Layer 3 , for different soil coverage

# Future Work

- Compare coupled MODCLASS model to carefully controlled field observations
- Obtain necessary data for Assiniboine Delta Aquifer
- RCM and look at climate change scenarios
- Imbed economics and policy alternatives

# Conclusions

- Early versions of a linked atmosphere (MM5), land-surface scheme (CLASS), stream flow (WATFLOOD) and groundwater (MODFLOW)
- MODCLASS?
- Incompatibility of codes

# Novelty of Research

- Aspects of internet technologies
- High resolution numerical simulations
- Scientific questions
- Societal impacts, economic analysis
- Integration of disciplines
- Maximize impact
