

**University of Manitoba
Department of Soil Science**

**Faculty of Agricultural and Food Sciences
SOIL 4400 Soil Ecology**

**Course Outline 2018
Instructor: Dr. Mario Tenuta
Department of Soil Science**

Introduction

Welcome to Soil Ecology! This is an exciting time, we are about to embark on a marvelous journey through the most complex ecological system known, SOIL. In our journey we meet many organisms that collectively are the soil food web. Each one has a role in determining processes having agronomic and environmental implications from determining conditions for growth of a root tip to affecting our climate. The presence and activities of soil organisms can be “a canary in a coal mine” or signal “all is well” for the long-term productivity and health of soil, and also of the environment. Any exploration of soil organisms requires knowledge of interactions of individuals within a population of similar organisms, interaction with other types of organisms and also interaction with the soil environment. Thus this course has the titled Soil Ecology because it is an exploration of interactions between soil organisms and their soil environment. Let’s begin the journey.

By the end of this course you will

- 1) have a greater appreciation for the life beneath your steps
- 2) be familiar with the function of the major groups of soil microorganisms and fauna in soil
- 3) understand the bioenergetics and nutritional requirement of key organisms in the soil food web
- 4) apply basic laboratory techniques and approaches to determine the kinds of soil organisms and their activities
- 5) know the role of the soil food web in the formation, degradation, and maintenance of organic matter
- 6) know the critical role of organisms in the cycling N, P, S and the consequence to crop nutrition and environmental quality
- 7) know the kinds of beneficial and deleterious associations plants have with soil microorganisms
- 8) know the practicality of using microorganisms to remediate/rehabilitate highly disturbed or contaminated soil
- 9) understand that the kinds and activities of soil organisms are affected by management practices and land use making some excellent bioindicators of good land stewardship
- 10) understand how we can build soil to be more productive and more efficiently use inputs
- 11) appreciate how soil organisms can alter our climate
- 12) be familiar with human pathogens found in manure and in soil
- 13) understand the science of composting

Your role

To be an active participant in lectures

To ask and respond to questions (keep in mind there is no such thing as a poor question)

Print the lecture handout prior to coming to class

Print and read the laboratory exercise prior to attending laboratories

When working as a team, all members are to share the work load

Explore the Soil Ecology Website (*Your Portal to Underworld Ecology*)

Let Dr. Tenuta know when you are not having fun learning about soil ecology

Above all, have an insatiable attitude for learning!

Web location of lecture and laboratory materials

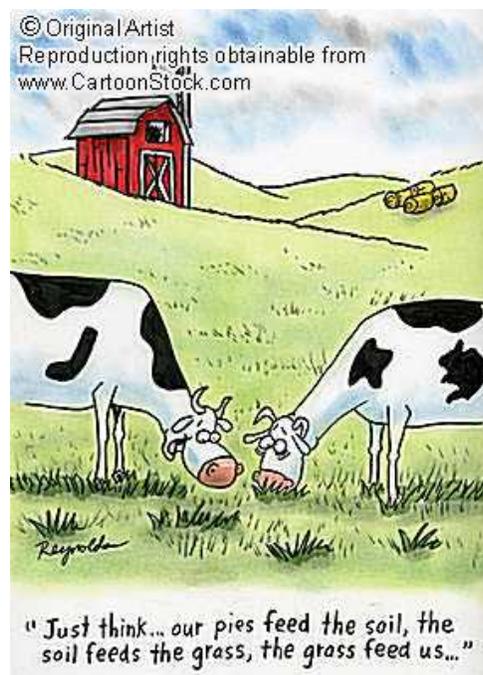

You will find lecture and laboratory materials at the following link, click on Soil 4400 at

<http://home.cc.umanitoba.ca/~tenutam/SoilEcology/SoilEcologyHomePage.html>

Some files will be in Adobe Acrobat format or in Microsoft Word and may be password protected. The password is
??????

Lecture slides and sometimes notes will be posted 24 hours prior to each session. Other materials required for this course will be posted on the web site, check frequently. In class we will go over the organization of the website.

You are required to know for exams all material covered in lectures and assignment presentations. Materials and links on the website are for your benefit to clarify items discussed in lectures and laboratories.

Instructor

Prof. Mario Tenuta
Department of Soil Science
Room 309, Ellis Building
Telephone: 204-474-7827
E-mail: mario.tenuta@umanitoba.ca
Consultation times
Please talk to me after lectures
otherwise appointments by e-mail

Lectures

T-Th 10:00-11:15
344 Ellis Building

Laboratory

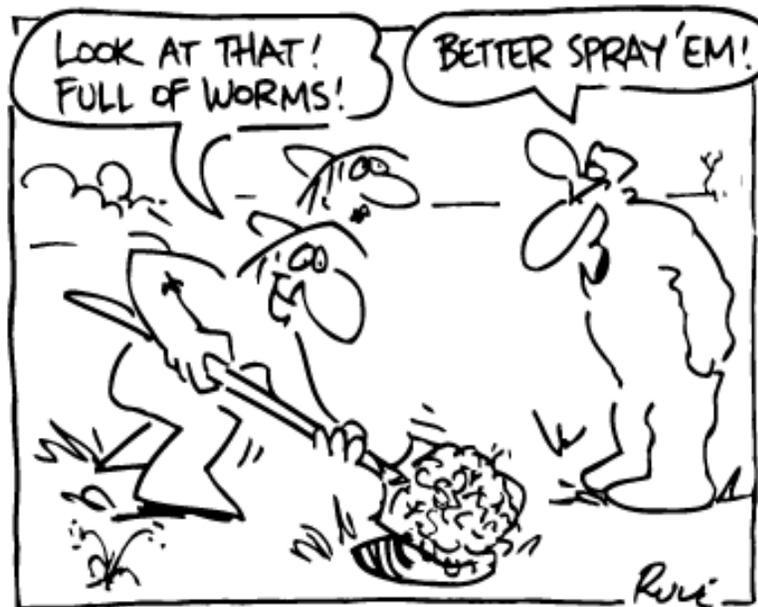

Th 2:30-5:30
Soils Lab Ellis. Start Jan 11, 2018

Textbook

None required

Suggested Text Readings

Soil Microbiology and Biochemistry 3rd Edition (Paul, 2007);
Fundamentals of Soil Ecology 2nd Edition (Coleman et al., 2004)

Hopefully you will learn what is wrong with this attitude

Course Evaluation

Mid-term.....	30%
Laboratory Assignments.....	20%
In-Laboratory Presentations	
Famous Soil Organism	6.7%
Famous Soil Ecologist	6.7%
Famous Soil Method	6.7%
Final Exam.....	30%
Total	100%

The results of the mid-term test will be returned well prior to the voluntary withdrawal deadline of March 16, 2018.

Examination and Assignment Dates

- Famous Soil Organism – Feb 1, 2018 in lab period
- Laboratory Assignments – done in lab period
- Midterm – Feb 27, 2018 in Class
- Famous Soil Method – March 8, 2018 in lab
- Famous Soil Ecologist- April 5, 2018
- Final Exam - TBD in Class between April 9-23, 2018 - 2 hour exam.

Please refer to the following website for University of Manitoba Bylaws and Procedures for cheating, plagiarism and fraud
http://umanitoba.ca/student/resource/student_advocacy/cheating_plagiarism_fraud.html.
 A summary of the bylaws and procedures follows.

ACADEMIC DISHONESTY

This course abides by the University's statement on Academic Dishonesty including sections dealing with 'plagiarism and cheating' and 'examination impersonation' outlined in the University General Calendar.

PLAGIARISM AND CHEATING

To plagiarize is to take ideas or words of another person and pass them off as one's own. In short, it is stealing something intangible rather than an object. Obviously it is not necessary to state the source of well known or easily verifiable facts, but students are expected to acknowledge the sources of ideas and expressions they use in their written work, whether quoted directly or paraphrased. This applies to diagrams, statistical tables and the like, as well as to written material. To provide adequate

documentation is not only an indication of academic honesty but also a courtesy which enables the reader to consult your sources with ease. Failure to do so constitutes plagiarism. Only when statements are placed in quotations and cited can they be reproduced from another work in a student's paper. Most often a student will paraphrase or summarize the work of another with a citation given for the source of the information. It will also be considered plagiarism and/or cheating if a student submits a term paper or laboratory report written in whole or in part by someone other than himself or herself, or copies the answer or answers of a fellow student in any test, examination, or take-home assignment.

Plagiarism or any other form of cheating in examinations or term tests (e.g., crib notes) is subject to serious academic penalty (e.g., suspension or expulsion from the faculty or university). A student found guilty of contributing to cheating in examinations or term assignments will also be subject to serious academic penalty.

EXAMINATIONS - IMPERSONATIONS

A student who arranges for another individual to undertake or write any nature of examination for and on his/her behalf, as well as the individual who undertakes or writes the examination, will be subject to discipline under the University's Student Discipline Bylaw, which could lead to suspension or expulsion from the University. In addition, the Canadian Criminal Code treats the personation of a candidate at a competitive or qualifying examination held at a university as an offense punishable by summary conviction. Section 362 of the Code provides:

"Personation at Examination

362. Everyone who falsely, with intent to gain advantage for himself or some other person, personates a candidate at a competitive or qualifying examination held under the authority of law or in connection with a university, college or school or who knowingly avails himself of the results of each personation is guilty of an offense punishable on summary conviction. 1953-54, c.51, s.347."

Both the personator and the individual who avails him/herself of the personation could be found guilty. Summary conviction could result in a fine being levied or up to two years of imprisonment

Lecture Outline

Module 1 – Introduction

What is Soil Ecology?

Biological indicators of soil health

Ecological environment of soil

Module 2 –Diversity of Soil Life

Module 6

Future Directions in Soil Ecology

Diversity of soil organisms

Tree of life, bacteria

Fungi, Protozoa, Chromista, Animals

Methods of studying diversity

Direct: observation and isolation

Indirect: signatures and molecules

Module 3 -Energy and Growth

Strategies to obtain energy

Module 4 –Element and Nutrient

Cycles

Carbon cycling

Importance of soil organic matter and building it in soil

Decomposition of Soil Organic Matter

Soil Food Webs

Nitrogen cycling

Biological N fixation, Mineralization

Nitrification, Denitrification

Module 5 –Applications in Soil

Ecology

Rhizosphere symbionts of plants:
Mycorrhizal fungi and PGPR

Science of composting

Degradation of Xenobiotics

Deleterious organisms to humans:
Animal pathogens

Deleterious organisms to plants:
Soilborne plant pathogens, biological control and disease suppressive soils

Global warming: Soil organisms,
greenhouse gas emissions, climate change

**“Le rôle des infiniments petits m’apparaissait infiniment grand.” Louis Pasteur
(1822-1895)**

I hope they have the same effect on you, enjoy the course.
