

### 136.169, Assignment No. 1

September 23, 2005

The assignment is due Friday, September 30, in class. Late assignments receive a mark zero.

1. Let  $f(x) = 3 - |x|$  and  $g(x) = \sqrt{x-2}$ .
  - a) Find the domains and the ranges of  $f$  and  $g$  and draw their graphs. [4]
  - b) Find the domains, ranges and formulas for the functions  $f \circ g$  and  $g \circ f$  (if the corresponding function is defined). Draw the graphs of  $f \circ g$  and  $g \circ f$  (if the corresponding function is defined).[5]
  - c) Check if  $f$  and  $g$  are one-to one, and if yes, find their inverse functions. [4]
  
2.
  - a) The point  $P$  lies on the  $x$  axis and the point  $Q$  lies on the line  $y = -2x$ . The point  $(2,1)$  is the midpoint of  $PQ$ . Find the coordinates of  $P$ . [4]
  - b) Find the  $y$  coordinates of the points of intersection of the circle  $x^2 + y^2 = 4$  and the ellipse  $x^2 + 2y^2 + 8y + 4 = 0$ . Draw a picture. [4]
  - c) What is the length (no decimal numbers, please) of the line segment having one end on the  $x$  axis, the other end on the  $y$  axis, passing through the point  $(1, 2 - \frac{2}{\sqrt{3}})$  and making an angle of  $150^\circ$  with the positive part of the  $x$  axis. Draw a picture. [4]
  
3. Using the formal definition of the limit, verify that:
  - a)  $\lim_{x \rightarrow -2} (5 - 2x - x^2) = 5$ . [4]
  - b) If  $\lim_{x \rightarrow 2} f(x) = L, L > 0$ , show that there exists  $\delta > 0$  such that, whenever  $0 < |x - 2| < \delta$ , we have that  $f(x) > 0$ . [6]
  
4. Showing all of your work, find:
  - a)  $\lim_{x \rightarrow 1} \left( \left( \frac{3 - x^2}{x^2 - 2x - 1} \right)^3 - 2x \right)$ . [3]
  - b)  $\lim_{x \rightarrow 2} \frac{2x^3 - 4x^2}{|2x - 4|}$ . [3]
