Current Research Projects

This scholarship continues my longstanding interest in the everyday geographies of families. This work centres on a critical analysis of the spaces and places that structure and influence the resources and behaviours of (aging) families.

Zoos as Therapeutic Environments and the Promotion of Their Use in Healthy, Active Aging
Urban green space has long been recognized as an integral element in the positive engagement in activities that promote health and wellbeing across all age groups. The history of the parks movement is steeped in the therapeutic effects derived from access to, and use of, pleasant, green environments such as urban parks. Zoos evolved in cities across North America as part of this parks movement, however the therapeutic benefits of viewing animals within a 'natural' setting have largely been overwhelmed by the mandates to conserve, educate and entertain which are at the heart of the modern zoological park. This research explores the benefits of reasserting the potential for zoos as environments that can promote healthy, active living, particularly amongst older adults. Zoos have become identified as locations to take children, however in an aging society where there are real concerns about health promotion / illness prevention, it is argued that it is time for zoological parks to once again assert the resources they offer to encourage active living and wellbeing.

Zoos as Social and Cultural Landscapes: Constructions of Nature, Gender, and Family
Zoos are cultural landscapes which reflect and reinforce norms and perceptions; zoos reflect not nature itself, but a human adaptation of nature. Like other sites of social activity, zoos are places where private family life is conducted in a public setting. They are places where families interact, as families, and where parents, especially mothers, bring their children to be both educated and entertained. This research, bringing together scholarship from feminist, animal, and cultural geographies explores the zoo as a landscape where the nature/family connection is inscribed into the zoo experience.
